

EEN1095 Portfolio Marking Rubric

Clarity & Structure of Portfolio/Paper (10%)

Assessment focus: Assess the combined clarity, organisation, completeness and presentation of both the portfolio and the conference-style paper, including adherence to required structure/format and inclusion of relevant appendices, references and supporting materials.

Band	Descriptor
0-39	No meaningful portfolio/paper is submitted, or the submission is so incomplete, disorganised or unusable that it cannot support assessment AND/OR the student cannot adequately explain or support significant parts of what has been submitted during interview.
40-49	The portfolio/paper is poorly structured, incomplete and/or difficult to follow; major supporting materials, references or required elements are missing AND/OR there is a significant disparity between the submitted materials and the student's knowledge displayed in the interview.
50-59	The core materials are present and the submission is readable overall, but structure, presentation, completeness and/or compliance remain weak. The student can adequately explain the main elements during interview.
60-69	The portfolio/paper is clearly structured, coherent and professionally organised, with only minor weaknesses in presentation, readability or completeness. The student can clearly discuss and justify the submitted work during interview.
70-100	The portfolio/paper is complete, highly coherent and professionally presented to an excellent standard. Structure, readability and supporting documentation are consistently strong, and the student can discuss and defend the submitted work in full detail during interview.

Use of Literature / State-of-the-Art in Developing the Solution and Tests / Experiments / Comparisons (20%)

Assessment focus: Assess how well relevant literature and state-of-the-art methods are used to motivate the project, inform design choices, and shape the development of tests, experiments and comparisons. Where an update to the literature review was needed, this should also be considered.

Band	Descriptor
0-39	There is no meaningful engagement with relevant literature/state-of-the-art, or it is misused in a way that does not support the project design or evaluation AND/OR the student cannot adequately explain or support significant parts of this material during interview.
40-49	Use of literature/state-of-the-art is weak, superficial or poorly connected to the project; its role in shaping the solution and evaluation is unclear or minimal AND/OR there is a significant disparity between the submitted material and the student's knowledge displayed in the interview.
50-59	Relevant literature/state-of-the-art is used at a basic level to support the solution and/or evaluation, but depth, synthesis and critical use remain limited. The student can adequately explain the main links during interview.
60-69	Literature/state-of-the-art is used well to justify important design choices and the development of tests, experiments or comparisons. The student can clearly discuss and justify how it informed the work during interview.
70-100	Literature/state-of-the-art is used in a highly effective, critical and insightful way to shape both the solution and its evaluation. The student shows a strong command of the field and can defend these links in full detail during interview.

Overall Quality, Complexity and Completeness of Design; Soundness of Design Methodology (30%)

Assessment focus: Assess the overall technical quality of the proposed solution, the complexity and completeness of the design, the soundness of the design methodology, and the extent to which the work reflects Masters-level engineering judgement, originality and/or ingenuity.

Band	Descriptor
0-39	No coherent design is evident, or the design/methodology is fundamentally flawed and clearly below Masters level AND/OR the student cannot adequately explain or support significant parts of the design during interview.
40-49	The design is weak, incomplete, poorly justified or methodologically unsound, with major omissions or deficiencies and little evidence of Masters-level complexity AND/OR there is a significant disparity between the submitted design and the student's knowledge displayed in the interview.
50-59	The design is satisfactory but limited. It addresses a defined problem, but depth, completeness, methodology and/or originality are restricted, with notable deficiencies. The student can adequately explain the main design choices during interview.
60-69	The design is very good and appropriate to Masters level, with a sound methodology and only minor deficiencies or omissions. It addresses a reasonably complex engineering problem and the student can clearly discuss and justify the design decisions during interview.
70-100	The design is excellent to outstanding: technically strong, complete, well justified and methodologically rigorous, with clear evidence of Masters-level complexity and notable originality/ingenuity. The student can discuss and defend the design in full detail during interview.

Design of Tests / Experiments; Relevance, Rigour, Completeness and Confidence of Results as Evidence that the Project Problem has been Solved (20%)

Assessment focus: Assess the quality of the test/experimental design, the appropriateness of comparisons, the rigour and completeness of the evaluation, the confidence that can be placed in the results, and the extent to which the evidence supports the claim that the project problem has been solved.

Band	Descriptor
0-39	No meaningful testing/experimentation is presented, or the evidence is invalid and does not support any defensible conclusion AND/OR the student cannot adequately explain or support significant parts of the testing/results during interview.
40-49	Testing/experimentation is minimal, poorly designed or weakly justified; results are incomplete, low confidence, poorly presented and/or insufficient to support the claimed outcomes AND/OR there is a significant disparity between the submitted work and the student's knowledge displayed in the interview.
50-59	Testing/experimentation is adequate and yields some useful evidence, but rigour, completeness, relevance of comparisons and/or confidence in the results remain limited. The student can adequately explain the main evaluation choices and results during interview.
60-69	Testing/experimentation is well designed, relevant and sufficiently rigorous; results are clear, credible and provide good evidence that the project objectives have been addressed. The student can clearly discuss and justify the evaluation and results during interview.
70-100	Testing/experimentation is comprehensive, rigorous and highly relevant, with strong comparisons and convincing results that provide high confidence the project problem has been solved. The student can discuss and defend the evaluation in full detail during interview.

Observations and Conclusions (10%)

Assessment focus: Assess the quality, depth and insight of the observations and conclusions drawn from the work, including how well limitations are recognised and whether future work is logically motivated by the results.

Band	Descriptor
0-39	No meaningful observations or conclusions are presented AND/OR the student cannot adequately explain or support significant parts of the written discussion during interview.
40-49	Observations and conclusions are weak, obvious, flawed or poorly justified, with limited insight and/or poor understanding of the implications of the work AND/OR there is a significant disparity between the written discussion and the student's knowledge displayed in the interview.
50-59	Conclusions are adequate and some reasonable observations/future work are given, but depth, critical reflection and insight remain limited. The student can adequately explain the main conclusions during interview.
60-69	Strong observations and conclusions are drawn, with sensible recognition of limitations and logical future work grounded in the results. The student can clearly discuss and justify these conclusions during interview.
70-100	Observations and conclusions are comprehensive, insightful and convincingly grounded in the evidence, with mature critical reflection and well-justified future work. The student can discuss and defend these conclusions in full detail during interview.

Documented Achievements Against Plan (10%)

Assessment focus: Assess the extent to which achievements are documented against the approved project plan, objectives and success criteria, including the quality of the evidence provided. Approved deviations or refinements to the plan may be accepted where they are clearly documented and justified.

Band	Descriptor
0-39	Achievements against the plan/objectives/success criteria are not documented in any meaningful way AND/OR the student cannot adequately explain or support significant parts of the submitted evidence during interview.
40-49	Documentation of achievements against the plan is weak, inaccurate or incomplete, with little convincing supporting evidence AND/OR there is a significant disparity between the submitted evidence and the student's knowledge displayed in the interview.
50-59	Achievements are documented adequately against the plan/objectives/success criteria, with acceptable supporting evidence, but clarity, traceability and/or strength of evidence remain limited. The student can adequately explain the main evidence during interview.
60-69	Achievements are documented well against the plan/objectives/success criteria, with organised and convincing supporting evidence. The student can clearly discuss and justify this evidence during interview.
70-100	Achievements are documented exceptionally well against the plan/objectives/success criteria, with comprehensive, traceable and compelling supporting evidence. The student can discuss and defend this evidence in full detail during interview.
